Preamble

Sustainable development and environmental preservation today require a rethinking of our materials and technologies. In this context, biomaterials have emerged as promising solutions, combining performance, ecological compatibility, and scientific innovation. The First National Seminar on the Application of Biomaterials in the Environment, to be held on October 28–29, 2025, in Adrar, is part of this dynamic. Its objective is to bring together researchers, doctoral students, and professionals to share recent advances, practical applications, and future perspectives in this rapidly evolving field.

Objective

This seminar aims to highlight research work related to the application of biomaterials in the environmental field, by showcasing innovations, interdisciplinary approaches, and experimental results obtained in research laboratories. It also serves as a privileged platform for exchange between young researchers, academics, and professionals, fostering the sharing of knowledge, strengthening of scientific skills, and the development of collaborations around current and future environmental challenges.

Official Languages: French or English; • The conference mode is Hybrid.
